

Benefits

- No capital expense or IT staff necessary to manage
- Gain end-to-end protection with an integrated backup and disaster recovery solution
- Easy deployment and automated data protection
- Secure, reliable, certified data protection infrastructure
- Centralized management
- Easy regulatory compliance
- Broad platform support
- 24x7 expert help

Cloud Backup Services

Get secure, reliable world-class online data backup without additional capital or IT expenses.

World-Class Data Protection to Fit Your Business

Powered by the EVault® professional-grade data protection technology platform, XO Cloud Backup Services offer a comprehensive suite of advanced data protection capabilities for mid-sized companies and large enterprises that can help maintain the efficiency and continuity of business operations by ensuring your data is always protected and available. There are three main components of XO Cloud Backup Services: EVault SaaS, EVault Plug-n-Protect Appliance, and EVault Remote Disaster Recovery.

EVault SaaS: Automated Online Data Protection

EVault SaaS is an automated online backup and recovery offering that provides secure, reliable, efficient protection of your organization's critical data, directly through the Internet. With EVault SaaS, you get a world-class data protection infrastructure that lets you safeguard your data without additional capital or IT expenses. It automatically backs up desktop, laptop and server data

from across your organization. You configure your desired retention schedule and monitor your backups via a web browser. Your data is deduplicated, compressed, encrypted, and then transmitted to a vault in one of our top-tier data centers. And it's all at your fingertips whenever you need it—with multiple options for fast, foolproof recovery.

How It Works

EVault SaaS centralizes the backup and recovery of data on all computers distributed throughout your organization—headquarters, branch offices, and even laptops. Agents automatically back up your data over the Internet to a highly secure data center. You monitor and manage everything within a web browser. Recovery is just as easy: When you need to restore data, you simply navigate to it via an intuitive interface, and then click. Our reports provide details about the status of your backups.

With XO Cloud Backup powered by EVault, you know that your data is protected by industry experts, according to the highest standards of security and reliability. EVault SaaS provides you with:

Secure Reliable, Certified Data Protection Infrastructure

- Our lights are always on, managing petabytes of data in multiple state-of-the-art North American data centers. This ensures that your data is stored at the highest level of classifications for data center reliability and performance.
- Independent audits, completed every year through SAS 70 Type II Certification, guarantee our facilities and processes conform to industry standards.
- FIPS-approved AES encryption locks your data before

Easy Deployment and Management

- A simple web interface takes the pain out of data protection.
- Technical specialists can help you set up even the most complex backup schedule in short order.
- Customizable views and simple task delegation speed operations.
- Hot backups support 24/7 operations by backing up mission-critical applications while they are online.

Broad Platform Support

- Platform support: Microsoft Windows, Novell NetWare, Linux, Sun Solaris, HP-UX, IBM AIX, IBM i, and VMware.

- Application support: Microsoft Exchange, Microsoft SQL Server, Microsoft SharePoint, Microsoft Cluster Services, Oracle, and other applications.

Ensured Compliance with Data Protection Policies and Regulations

- Flexible retention scheduling helps you satisfy internal and external requirements.
- EVault Reports provide instant, centralized, and accurate information about your entire backup and recovery process

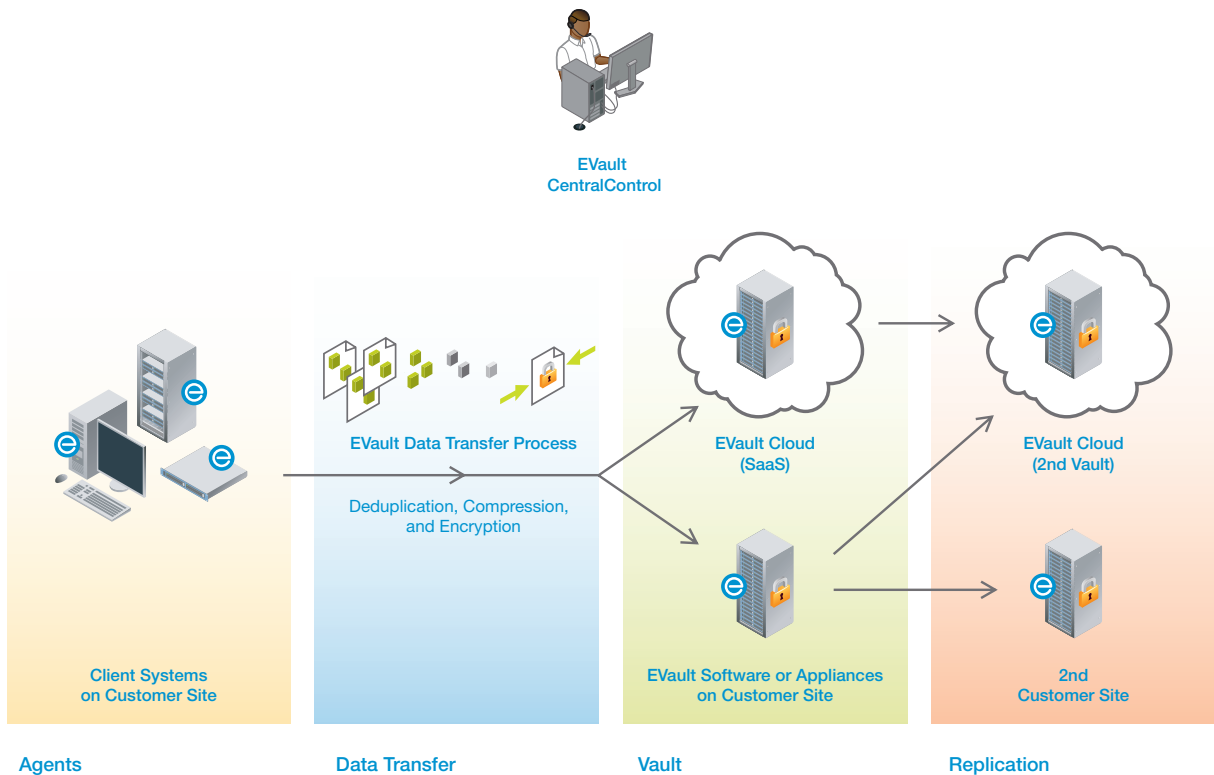

Optimized Performance with Advanced Compression and Data Deduplication

- Front-end data deduplication relies on EVault’s delta block-level processing technology, which ensures that only new and changed blocks of data within files are sent to storage, decreasing backup times and reducing storage footprints.
- Back-end data deduplication streamlines storage by eliminating redundant blocks of data within backup jobs, further decreasing storage footprints without compromising performance and scalability.

- Compression technology and bandwidth throttling maximize backup transfer speed and reduce impact on productivity.

Multiple Options for Data Recovery

- Lose your files and folders? Point and click to recover over the Internet.
- Need LAN-speed backup and restore for remote and branch offices? The EVault Express Recovery Appliance provides the best of both worlds—local and offsite backups. You back up to an onsite vault that automatically replicates data to an offsite disaster recovery vault.
- Need a lot of data restored in a hurry? With EVault Premium Data Transfer Services, we’ll ship you a hardware appliance loaded with your data. Entire site down due to natural disaster? EVault Remote Disaster Recovery Service recreates critical servers in your environment in just hours.
- Looking for a bare metal restore solution? EVault System Restore enables you to quickly recover an unusable system after catastrophic failure onto similar hardware, dissimilar hardware, or a virtual machine—in minutes

EVault Remote Disaster Recovery Service

EVault Disaster Recovery Service is a cloud-based and managed offering that ensures you can quickly recover your critical data and systems after a disaster – and remotely access it in a secure virtual environment within 24 or 48 hours (depending on level of service), regardless of your location. The service is a key component of EVault's complete cloud-connected data protection suite, an integrated, end-to-end solution for comprehensive backup and fast disaster recovery. Like all EVault products, Remote Disaster Recovery Service supports multi-platform environments that include Windows, IBM, Linux, and VMWare.

World-Class, Cloud-Based Recovery

With EVault Remote Disaster Recovery Service, your critical data is hosted and protected in top-tier, SAS 70 Type II-certified data centers. These facilities feature a virtualization platform that provides best-in-class redundancy and performance, high availability, and superior storage efficiency to dramatically reduce the cost of achieving world-class disaster recovery.

End-to-end encryption ensures that data remains private, satisfying your organization's specific regulatory compliance requirements. Because Remote Disaster Recovery Service

is cloud-based, there are no upfront capital expenditures; the service eliminates the expense, and the complexity, of maintaining your own DR site. And because we provide you with remote access, as long as you have an Internet connection you can securely recover data and applications from wherever you happen to be.

EVault Plug-N-Protect Appliance

Buying components separately and creating your own backup and recovery solution can take a lot of time, resources and expense. Deploying the award-winning EVault Plug-n-Protect product and much of the work has been done for you. Plug-n-Protect is an all-in-one back and recovery appliance consisting of pre-configured hardware and storage, plus a complete suite of EVault products for the fastest path to comprehensive data protection.

Exceptional Customer Support

- U.S.-based support staff of highly trained experts available 24x7
- XO installation services teams can help you build, test and execute your data protection strategy

Choose XO Cloud Backup services powered by EVault for a secure, reliable and efficient solution for protecting your company's critical data – without additional capital or IT investment.

About XO Communications

XO Communications is a leading nationwide provider of advanced communications services and solutions for businesses, enterprises, government, carriers and service providers.

XO customers include more than half of the Fortune 500, in addition to leading cable companies, carriers, content providers and mobile network operators. Utilizing its unique combination of high-capacity nationwide and metro networks and fixed wireless capabilities, XO offers customers a broad range of managed voice, data and IP services with proven performance, scalability and value in more than 85 metropolitan markets across the United States.
