

INFORMATION PROTECTION A Business Continuity Solution

Protect your information with a wide range of data protection services from XO Communications.

In today's digital business world, data about products, services, employees, customers, finances, operations and systems represents your organization's financial and operational health. Protecting and securing this data is critical to your ongoing operations. A significant loss of data would be a disaster, regardless of the size of your company or organization.

In many industries, government regulations and industry standards have been put in place to ensure integrity and security of data, including Sarbanes-Oxley, Health Insurance Portability and Accountability Act (HIPAA), Federal Information Security Act (FISMA) and Payment Card Industry Data Security Standard (PCI DSS).

The bottom line is that organizations need to exercise due care to ensure that necessary data is available and secure.

XO® Information Protection Solutions include:

- MPLS IP-VPN – High-performance, private MPLS-based wide area network solution that transmits data traffic across your network so that it does not touch the public Internet.
- Managed Security – Protection for data against hacking and viruses.
- Managed Backup – Backs up your mission-critical data to a remote location with full restore back to primary data center.
- Perimeter Email Protection – Filters and scans Email to help block spam and viruses and backs up Email during an outage.
- Web Hosting – Leverages XO Communications' patented Clustered Hosting Platform to help ensure your company's web presence stays online.
