Extensive Peering Infrastructure

Our peering relationships provide direct paths to all major network service providers, enabling Internet traffic to traverse shorter distances, at speeds up to 10GB.

Intercity Fiber Network

Manage customer data via Dense Wavelength Division Multiplexing (DWDM) routing technology across our 19,000 route mile intercity network.

Metro Fiber Connectivity

Ensure efficient data transfers to the XO intercity network over our 9,000 metropolitan route miles, throughout 41 major US cities, including the top 30 in the nation.

Our network includes More than 3,300 fiber-fed, on-net buildings

Colocation at all major network access points, including PAIX and Equinix

Approximately 1,000 incumbent local exchange carrier central office locations

Fixed wireless licenses covering 95% of the top US business-focused markets

The XO Network

Delivering Leading Solutions At The Fastest Speeds Available Today

XO Communications owns and operates a private, nationwide, Tier 1 multi-terabit network, delivering industry-leading solutions that offer the highest levels of performance, security and reliability, at the fastest speeds available today. Our network assets include nationwide IP and transport networks, extensive metro assets, and fixed wireless capabilities that afford XO the ability to manage customer data from the point of access to the point of termination. This integrated network provides our customers a single-source telecommunications solution – within a metropolitan area or across the country.

By carefully selecting equipment vendors that focus on next-generation standards, XO has built a cost-effective, scalable network that can handle today's customer demands, as well advanced broadband applications of tomorrow. With a multi-terabit routing core, our high capacity IP network provides speed, capacity and flexibility, allowing XO to offer services that take advantage of future transport, IP and Voice over IP technological evolutions. Our transport network, with terabit capacity deployed nationwide, enables XO to offer and quickly provision a broad range of carrier-grade, high-speed network transport services.
