Provide employees across your network with secure access to cloud applications, lower network costs, and easily accommodate fluctuating bandwidth demands from cloud usage.

**Achieve High-Speed, Connectivity to Cloud**

IT and network managers are looking for a better way to scale network bandwidth to support cloud applications. Imagine being able to eliminate the frustrating process of provisioning network connectivity, circuit by circuit, as well as the added expense of overbuying bandwidth to accommodate spikes in bandwidth usage.

**BENEFITS**

- Maximize your investments in the cloud
- Leverage scalable, cost-effective, high-speed connections
- Bandwidth is ready when you need it
- Ensure on-demand bandwidth availability and improve performance of cloud-based applications
- Get stronger network protection when accessing the cloud—using secure VPN protocols instead of accessing the cloud over the public Internet
- Connect your local, national or international locations
- Maintain quality of service

FOR MORE INFORMATION, CONTACT YOUR XO REPRESENTATIVE, VISIT [XO.COM](https://xo.com) OR CALL 866.349.0134
XO Bandwidth-on-Demand provides your business with flexibility and scalability to support multi-cloud deployments, and to interconnect your data centers.

This is increasingly important as businesses look to a combination of public, private and hybrid cloud architectures to meet their business and IT requirements.

How It Works

With the XO Bandwidth-on-Demand feature, you commit to a minimal amount of bandwidth needed on an average monthly basis. If your network usage rises above the committed level, the XO network connection will automatically expand to accommodate the extra traffic—while also maintaining any pre-selected, Quality of Service settings.

There’s no need for you to pre-schedule bandwidth bursting in advance. XO Bandwidth-on-Demand automatically accommodates fluctuating usage—and simply works in the background when you need it—to ensure availability and consistent performance.

Move at the Speed of Today’s Business

With XO Bandwidth-on-Demand, you’ll implement direct network connections to the cloud that accommodate fluctuating usage in an efficient, secure, and cost-effective manner. Get the fastest network on-ramps to support your organization’s multi-cloud strategies.
