

# Wholesale MPLS IP-VPN

## Benefits:

### More Bandwidth Options

Take advantage of a wide variety of access options, ranging from T-1 up to 10Gbps.

### Multiple Services, One Connection

Capable of delivering dedicated Internet access services and MPLS-based service over the same physical connection.

### Affordable & Cost Effective

Multiple access technologies translate into lower loop costs, while our simplified pricing model provides customers with improved retail pricing flexibility.

### An Expanded & Diverse Network

Extend your reach to nearly 10 million businesses across 85 top US markets, while utilizing local access technologies, from fiber optics to Ethernet over Copper.

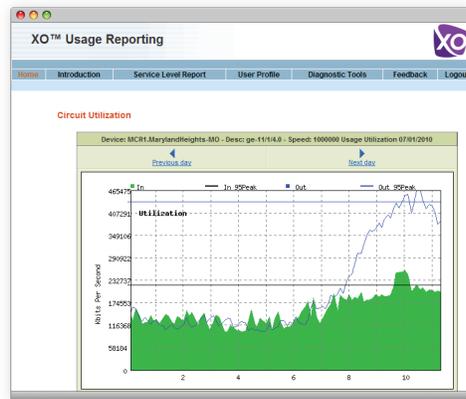

## Cost-Effective, Reliable & Secure Connectivity for Multiple Locations

Wholesale MPLS IP-VPN is an application-aware, private, wide area networking solution for IP data transport between multiple locations, allowing users to run critical applications, such as VoIP, video and point-of-sale business applications, with maximum performance. This service offers customers the ability to improve their overall network performance, providing a platform for continued growth and innovation, while reducing the total cost of ownership associated with supporting their end-users who have multi-location network requirements.

Wholesale MPLS IP-VPN service provides customers with four optional classes of service, including real-time, critical, priority and standard. Service level agreements associated with the offering vary by the chosen class of service and cover critical service elements such as latency, packet delivery, jitter and availability.

## Built With Automation & Management In Mind

We've made considerable investments in automation in order to make it easier for our customers to manage their businesses. By providing automation throughout the customer lifecycle, XO enables you to shorten cycle times, reduce overhead expenses, realize increases in productivity and revenue, and ultimately support a growing number of satisfied customers.

In addition, MPLS IP-VPN customers have access to management tools, such as XO Stats, a portal providing circuit level information and service level reporting.
